PERSONAL PROJECTS

Expense Tracker

- A web application that is developed within a week by React.js
- First of all, add some of your diurnal transactions and specify income or expense, then let the app figure your money and account
- This project's interface has designed by Tailwindcss
- check out on my Github [Link](#)

Todo App

- A web application that is developed within two days by React.js.
- In this app, you have an input to add your daily Todos, after done that Todo you can check it to become completed. You can also delete, edit or filter your todos.
- check out on my Github [Link](#)

Inventory App

- This project's interface has designed by Tailwind and a logic with vanilla JavaScript
- At first add some custom categories, and after that add products via added categories. now you can sort or search amid products
- check out on my Github [Link](#)

Advice Generator app

- A simple and minimal web-application that can generate some advice for you !
- I've used Rest API technology and Axios library in this app
- check out on my Github [Link](#)
